Dear Jeff and Scott,

Thank you so much for bringing your Ultrasound Guided Peripheral Nerve Block Conference to Columbus, NE. I received so much positive feedback regarding the conference that I am sure we will be hosting one again soon. Ultrasound Guided Regional Blocks have become a standard now at our institution and are setting us apart from other hospitals in our state. Patients are having better pain relief and our physicians are pleased with their patient outcomes. Use of the blocks is helping us achieve our goal of decreasing the amount of opioids used in the post-operative period and allowing our patients to participate earlier in therapies.

Many of those that attended the conference liked the format of how you would instruct on a particular block and then immediately go practice with the ultrasound. They felt this helped with their technique and understanding of the procedure. The participants also appreciated the recommendations of pharmacological agents used in each block. Many participants commented on how well the conference was run and would highly recommend it to their peers. Thank you again for bringing your expertise to Columbus, NE. I am sure we will be hosting a conference again soon. We look forward to working with you in the future.

Kindest regards,

Jennifer Swantek MSN, FNP-BC
